## Security as a Service (SECaaS)

### The High Price of Vulnerability

Today's highly sophisticated cyber criminals consider weak corporate infrastructures to be easy prey. Gone are the days of relying on a firewall or anti-virus software to protect your company.

The frequency and destructive nature of cyber breaches is alarming. They can bring significant damage to a company's reputation and impact every aspect of an organization.

Security as a Service (SECaaS) assesses the security of your network and protects the core of your organization - your data. Regardless of industry or size, SECaaS enables your company to take a proactive, preventative approach to cyber security.

### What Exactly is SECaaS?

Available as either subscription or a-la-carte, SECaaS is designed to protect an organization's systems and data against a cyber breach.

Examples of SECaaS services include:

- Network Vulnerability & Penetration Testing
- IT Policy Review
- Software Update Procedures Review
- Data Backup Procedures Review
- Disaster Recovery Review
- Compare security policies/standards with industry standards for compliance
- Existing Anti-Virus Management System Review
- Firewall Configurations Review
- Mobile Device Policy Review
- Remediation Services and Strategies

”

*“Security is paramount and as such, our solutions combine strategy and technology to create a unique and intentional approach.”*

*Phil Keeney,  
Information Technology and Client Relations Manager*

## Security as a Service (SECaaS)

### What are the benefits of SECaaS?

The concept of securing things we value isn't new, but the ways in which we protect ourselves have become more complex. SECaaS provides significant benefits including:

- Consistently Updated Protection
- Security Expertise without the Full Time Price Tag
- Enhanced Security Awareness
- Increased Productivity
- Established Best Practices and Policies

Nearly every company uses IT to support both their operations and their overall business objectives.

As a business leader you have a vested interest in keeping the systems, processes, and data of your organization safe and secure. SECaaS provides that protection.

### How is the SN Approach Different?

SN's team of highly skilled technology professionals are risk-focused, so you don't have to be. Our comprehensive suite of SECaaS offerings allow you and your IT staff to focus on your day to day responsibilities.

Collaborating with you, we will ensure that your organization has effective and efficient controls in place that strategically align technology with your business strategy. All while helping you overcome vulnerabilities without exhausting your internal IT resources.

”

*“The risk is real and we encourage every company, of every size and in every industry to prioritize security.”*

*Phil Keeney,  
Information Technology and  
Client Relations Manager*
